

Challenge #1: Goal

Name: Martinez, Jireh Gem D.

ICT 01

1 BSCS-A

The plan I have in mind for the final project is to make a website which is a tribute page in relation to my favorite pop artist, Harry Styles. In my website you will see different sections like the main section will be Harry Style's profile, second is a short biography about him, third is his most viewed music video, fourth is his albums which is also linked to an official spotify and youtube page, and lastly, the contact (although the contact does not exist and it is just made up) being provided for online purchase of merchandises. I purposely made this website to come out as simple and minimal which I also based from his official website which also approached to a minimalistic style. I'm using HTML, CSS, and JavaScript. For HTML base on my source code, I have created five sections, which I have mentioned above, for profile, biography, music video, albums, and contact. I placed the navigation menu from top and bottom for everyone to click on it and be taken to wherever section they want to be designated, it will things easier for them to scroll through my website. For CSS I will use it for styling and also for JavaScript as a tool to use for my navigation menu.
